

VHF Arctic Grade Antenna

Model D8076

The TACO Model D8000 series antennas are vertically polarized omni-directional antennas. The D8000 series are specifically designed to minimize ice accretion on the antenna surface while providing exceptional performance throughout the frequency band ranging 118-137 MHz. The internal components of the antenna are enclosed in a fiberglass radome, ultimately resulting in a lightweight, low profile, rugged communications antenna.

Features

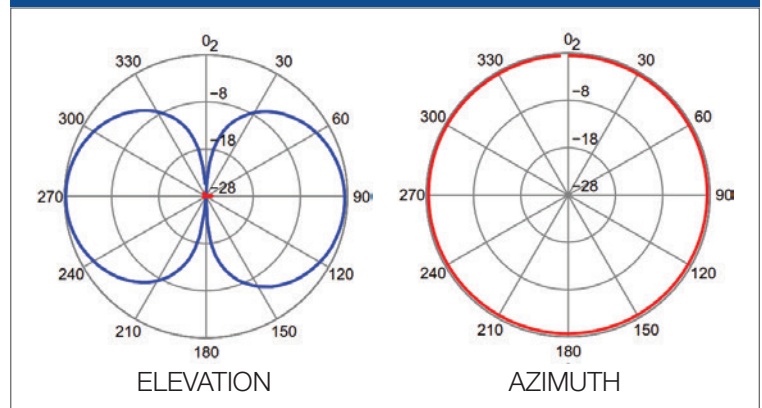

- Independent lab testing shows an 18% reduction in ice accretion
- Rugged lightweight construction
- Enclosed in fiberglass radome
- Metal base with DC ground attachment
