

VHF Arctic Grade Antenna

Model D8076

The TACO Model D8000 series antennas are vertically polarized omni-directional antennas. The D8000 series are specifically designed to minimize ice accretion on the antenna surface while providing exceptional performance throughout the frequency band ranging 118-137 MHz. The internal components of the antenna are enclosed in a fiberglass radome, ultimately resulting in a lightweight, low profile, rugged communications antenna.

Features

- Independant lab testing shows an 18% reduction in ice accretion
- Rugged lightweight construction
- Enclosed in a 'Graphite Grey' fiberglass radome
- Metal base with DC ground attachment

ELECTRICAL SPECIFICATIONS

FREQUENCY RANGE	118-137 MHz	
GAIN (dBi)	2.0	
VSWR (Maximum)	2:1	
HPBW	HORZ.	360°
	VERT.	75°
POLARIZATION	Vertical	
IMPEDANCE (Ohm)	50	
POWER (Maximum)	500 W	
TEMPERATURE	-50° to 70°C	
OUTPUTS	1	
CONNECTOR	N Female	

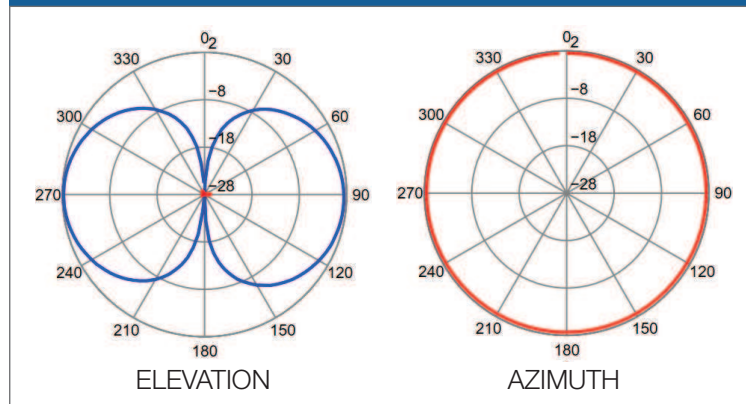

MECHANICAL SPECIFICATIONS

LENGTH	65 in.
MOUNTING PIPE	9.0 lbs.
WEIGHT	2.875 in.
COLOR	Graphite Grey

WIND LOAD SPECIFICATIONS

WIND AREA (NO ICE)	1.08 sq. ft.
WIND AREA (1/2" RADIAL ICE)	1.55 sq. ft.
RATED WIND VELOCITY (NO ICE)	175 mph.
RATED WIND VELOCITY (1/2" RADIAL ICE)	145 mph.

PATTERNS

GAIN & VSWR

TACO Antenna's ongoing policy of continuing development may result in specification changes to its products.
