

**Please Note:** A qualified structural engineer should be consulted prior to mounting an antenna on a tower or support structure.

# INSTALLATION INSTRUCTION

KEEP ANTENNA AND CABLES AT A SAFE DISTANCE FROM ANY POWER LINES.
TO PROTECT YOUR ANTENNA AND RECEIVER FROM LIGHTNING DAMAGE, ENSURE YOUR EQUIPMENT IS GROUNDED.

### **PACKAGE CONTENTS**

- 1 x Mast Assembly
- 1 x Azimuth Rotational Head
- 1 x Cross-Arm Support
- 1 x Cross-Arm
- 1 x Elevation Adjustment Rod
- 18 x Plate Counterweight
- 2 x Washer for 1" Screw
- 2 x Hex Nut 1"-8

- 1 x Screw ½"-13 x 2"
- 13 x Lock washer for ½" Screw
- 17 x Hex nut ½"-13
- 1 x Screw ¾"-10 x 12"
- 2 x Screw ½"-13 x 3-½"
- 2 x Washer for ½" Screw
- 6 x Screw ½"-13 x 2"
- 8 x Screw ½"-13 x 5"

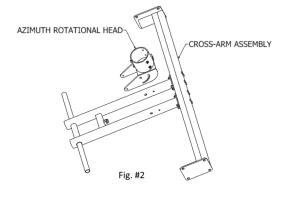

- 18 x Counterweight
- 2 x Shaft Collar
- 4 x V-Bolt ¾"-10
   4 x Mast Clamp
- 9 x Hex Nut ¾"-10
- 9 x Lock washer for 34" Screw

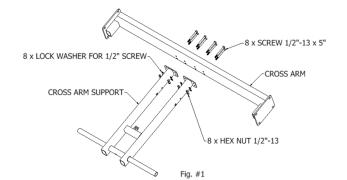

### **ASSEMBLY OF CROSS ARM TO CROSS ARM SUPPORT**

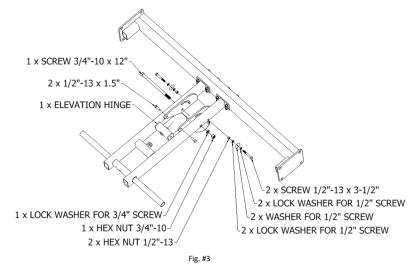

Attach cross-arm to cross-arm support using hardware provided in HDW. PKG. #1:
 8 screws ½"-13, 8 lock washers & 8 nuts, Fig. #1.

### **ASSEMBLY OF CROSS ARM TO CROSS ARM SUPPORT**

- Insert Azimuth Rotational Head between two arms of Cross Arm Support, Fig. #2. Use hardware provided in HDW. PKG. #2 to secure it in place.
- Insert screw ¾"-10 x 12" thru cross-arm assembly and azimuth rotational head, secure it with 1 lock washer & 1 hex nut.
- Insert 2 screws ½"-13 x 3-1/2" thru holes in cross arm assembly, thru slots in azimuth rotational head & secure as per Fig. #3.
- Position the elevation hinge between two plates of the rotational head and apply Loctite (thread-locker) to ½"-13 X 1.5" screws. Do not tighten screws, leave a gap of 1/16" between the plates and the screw head. The elevation hinge needs to be able to rotate in place.

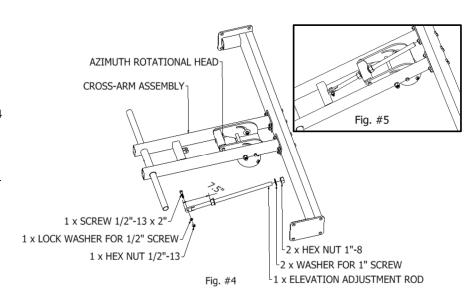

**Please Note:** A qualified structural engineer should be consulted prior to mounting an antenna on a tower or support structure.

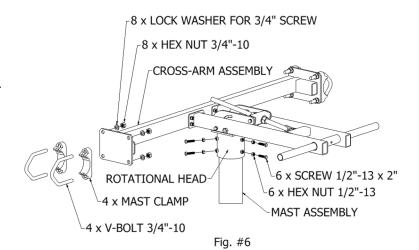

### **ASSEMBLY OF ELEVATION SHAFT**

- Use hardware provided in HDW. PKG. #3
- Position 1"-8 hex nut roughly 7.5" from the end of the elevation adjustment rod, followed by 1 flat washer for 1" screw, Fig. #4
- Insert the elevation adjustment rod through the azimuth rotational head and secure the end of the elevation rod to the cross-arm assembly using ½"-13 x 2" screw, lock washer for ½" screw, and ½"-13 hex nut.
- Use a second 1"-8 flat washer and 1"-8 hex nut to lock in place cross-arm assembly at a specific elevation.
- Fig. #5 shows the position of the elevation adjustment rod after the installation.

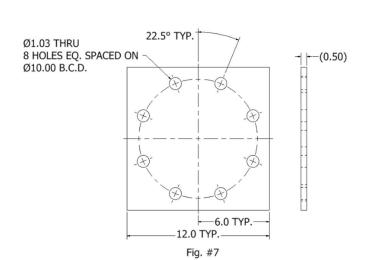

## **ASSEMBLY OF CROSS-ARM TO A MAST ASSEMBLY**

- Use hardware provided in HDW. PKG. #4
- Insert mast into azimuth rotational head and secure it using 6 screws ½"-13 x 2" and 6 hex nuts ½"-13, Fig. #6.
- Attach 4 mast clamps and 4 V-Bolts to cross-arm assembly using 8 lock washers for ¾" screws and 8 hex nuts ¾"-10.

#### **INSTALLATION OF A MAST ASSEMBLY TO A CONCRETE BASE**

- See the local installer for recommended concrete base sizes and appropriate base stubs.
- A base of the mast can accommodate up to 8 anchor bolts and we recommend a minimum of 8 anchor bolts to be used to secure it to the concrete base.
- For hole size and hole positions see Fig. #7.

**(P)** 519.756.7157 www.wadeantenna.com

**Please Note:** A qualified structural engineer should be consulted prior to mounting an antenna on a tower or support structure.

#### **INSTALLATION OF ANTENNAS TO PEDESTAL MOUNT**

- Secure antennas to mount using provided v-bolts and mast clamps.
- Position antennas so that the mast is positioned roughly 2" past the second v-bolt.
- For optimum performance keep antennas aligned to each other (2" past the second v-bolt) and orient antennas so connectors are in the same orientation.
- Once antennas are installed use counterweights to counterbalance the mount
- Use shaft collars HDW. PKG. #4 to secure counterweights in place
- Attach the feed line to antennas and weatherproof all connections appropriately.
